

General application overview

About the process

With the use of **SEW Clean™**, TRAC has developed a cost effective chemical cleaning process that will remove both sludge and scale deposits from within wastewater lines. Requiring very little dismantling, an application can be completed within days, restoring a system to like-new conditions!

Best of all, SEW Clean is non-toxic, biodegradable, and will not harm any of the components commonly found within a system. When an application has been completed SEW Clean can be safely disposed of through city sew lines eliminating the need for costly disposal fees.

- ***Minimal downtime!!***
- ***Safe, Non-Toxic!!***
- ***Biodegradable!!***
- ***Cost effective!!***

BEFORE

AFTER

Brief Procedure

- Inspect the system's piping to make sure it is in good condition (no holes caused by corrosion).
- Isolate section to be cleaned with a line plug, pig, valve, etc.
- Fit flushing manifold to drain line users.
- Fill the system with water to check for leaks.
- Inject SEW Clean into water, circulate the solution for a minimum of 6 hours.
- Reopen isolating plug and flush each user thoroughly with water.
